

## **Solo Mini Software Change Notes**

### **CD/USB control software:**

#### **CD/USB Version BUC019039**

Fixed readability issue with certain copy-protected discs.  
Ensures that mixed-mode discs play the CD audio session.

#### **CD/USB Version BUC019035**

Production release

## **Main unit software:**

### **Version 3.7**

Software update to support new replacement VFD module (initialization delay).

### **Version 3.6**

Software supports both original and EuP-compliant hardware variants.

### **Version 3.3**

Updated iPod communication baud rate to 19200bps for better reliability with new irDock.

### **Version 2.7**

Fixed RS232 CD/USB elapsed time format  
Improved audio quality during CD fast-forward and rewind  
Implemented full RS232 status updates for USB playback  
Improved keypad tuner preset selection for presets >9  
Fixed error with FM tuner stereo indicator

### **Version 2.2**

Added feature to iPod control to release the iPod control so that the user can browse for video clips  
Added better handling of non-standard iPod characters  
Suppression of RS232 transmission when an iPod is connected so as not to wake the iPod unnecessarily  
Improved error handling for DRM-protected WMA files on USB  
Added time synchronisation to FM RDS or DAB  
Improved sleep countdown timer display  
Removed strange characters shown in DAB station names (BBC Radio 5)  
FM preset 30 recall bug fix  
Improved handling of multiple overlapping alarms – latest alarm cancels earlier active alarms.

### **Version 2.1**

Production release
