

AVA15/AVA25/AVA35/AVP45

Software Update

Software updates are periodically made available to improve functionality and performance where possible.

Requirements:

- ARCAM Radia AV devices must be connected to the internet by Wi-Fi or Ethernet. If there is no internet connection available, the USB update method can be used.

Out of the box - Quick Setup:

When turned on for the first time, a Radia AV device offers a Quick Setup experience. This includes establishing a network connection, and checking for and processing any available software updates. We encourage that this opportunity be taken to allow the download of the latest software and complete the update before you start configuration.

Subsequent Software Updates:

The Radia AV device will notify users of the availability of any available software update, allowing you to choose when to install it. If you prefer a more hands-off experience, you can enable automatic updates via:

- **Menu → Settings → General Setup → Auto Software Update**

Options include:

- **Notify Only** – the default setting, a notification of a new software update is displayed at startup.
- **Update in Standby** – updates happen quietly in the background whilst in standby.
- **Update Immediately** – always stay fully up to date with an established internet connection using Wi-Fi or Ethernet.

Check for update:

You can check for an update and install it via:

- **Menu → Settings → General Setup → Update Available**

You will be able to select this option if an update is available. It will be grey and not selectable if a software update is not available.

Do not remove power during a software update!

- Once complete the unit will restart.

V3.0 Software Versions	AVA15	AVA25	AVA35	AVP45
