

ST5

Software Update

Software updates are periodically made available to improve functionality and performance where possible. The ST5 is designed to process these updates overnight whilst in standby with an established internet connection using Wi-Fi or Ethernet.

Requirements:

- The ST5 must be connected to the internet by Wi-Fi or Ethernet. If there is no internet connection available, the USB update method can be used.

Check for update:

Follow these instructions to check for an update and install it:

- Power on the ST5 and allow it to boot until the display shows **READY**.
- Connect to the ST5 with the ARCAM Radia app.
- In the app, select the cog icon in the top right corner to access the network settings menu.
- Navigate to **Internet Update** and then **Check for update**
- Where an update is available, the ST5 will begin the update. During the process, the display can go blank for short periods.

Do not remove power from the ST5 during this process

- Once complete the unit will restart.

USB Update

Alternatively, the ST5 can be updated by USB. The files and instructions can be downloaded [here](#).

V2140

Release date: November 6th, 2025
